

Greetings from Alec as the compost mixer

- > Thanks to everyone who puts their kitchen waste in the
- > trashcans to turn into our commons compost.

- > I thought that it would be a good time to share some info
- > about the process.

- > I realize that not everybody who lives here nowadays,
- > knows some of the things that I take for granted about
- > the compost "system".

the following information is to try to get everyone updated.

- > First of all there are two collection cans for kitchen
- > waste for the compost. One by the dumpster in the
- > upper parking lot and another by the compost bins
- > themselves. If anyone sees something like "living
- > grains of rice", know that those are maggots growing
- > up to be flies because someone left the top off.

- > Please make sure to keep the top on the compost cans!

- > Secondly, kitchen scrapes go only in the above
- > mentioned trash cans. Nothing should be placed in
- > the wooden bins themselves.

- > Thirdly, the bins are meant to make compost from our
- > kitchen waste , so please no plastic bags or other non compostable materials.

- > The compost is meant to be used only on common
- > landscaping and not in our private yards, as there is
- > only a small amount generated every year.

The grounds committee should be the source of information about
>> when the compost is ready and where it can be used.

- > The manure in the bin next to the compost bins is only
- > for use in making compost. If people need manure there
- > is the nearby Nix's Stables.

- > Thanks for reading this. If anyone has any questions
- > feel free to ask me.
